

propa[®]grip
dryguard

To solve problems caused by:

Leaking liquids

Condensation

Wet pallets

The first paper interlayer that is not afraid of liquids

The durable paper interlayer that minimises damage caused by the leakage of all types of liquids. With **PROPAGRIP DRYGUARD** you can minimize damages caused by leaking liquids on pallets.

Spilled liquids, condensation and wet pallets can damage and potentially ruin goods. To minimise this damage, a paper interlayer with a liquid-resistant barrier has been developed.

PROPAGRIP DRYGUARD is a paper interlayer with a barrier treatment that makes it significantly more resistant to contact with liquids, whatever they may be: water, oil, pharmaceuticals and various chemicals. The paper is FSC[®] MIX certified and is fully recyclable.

PROPAGRIP DRYGUARD is a revolutionary product that keeps cargo protected from damage during shipment. Thanks to the liquid-resistant barrier, the load will remain stable and safe during transport, in the warehouse and at the point of sale.

The **PROPAGRIP DRYGUARD** paper interlayer can be used for many different purposes such as bottles, cans, boxes, tissues, bags and furniture. Each type of product and packaging requires a different type of interlayer and the **PROPAGRIP DRYGUARD** is therefore available in three variants: **Gold, Silver and Bronze.**

propa[®]grip
dryguard

PROPAGRIP DRYGUARD GOLD

Specifically for **leaking liquids**.

It has a liquid-resistant barrier and a non-slip coating on both sides that ensures maximum stability of the goods during storage and transport.

Recommended use: pharmaceutical articles, chemicals, Big Bags, etc.

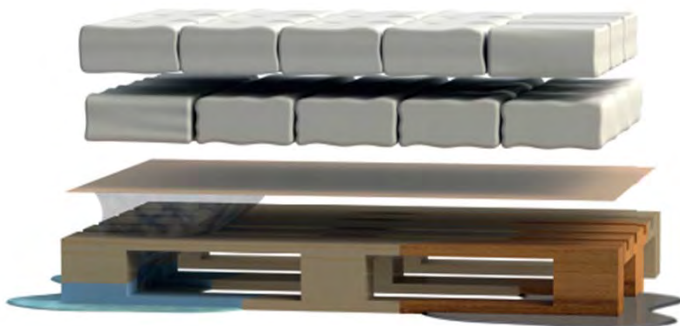

PROPAGRIP DRYGUARD SILVER

Specific for **condensation**.

It is a paper interlayer with a liquid-resistant barrier, with a non-slip coating on one side and testliner on the other.

It is particularly useful for applications where condensation may occur.

Recommended use: bottles, cans and similar items.

PROPAGRIP DRYGUARD BRONZE

It is a regular paper interlayer with a liquid-resistant barrier and natural friction. It is the perfect substitute for a traditional polyethylene-coated interlayer, but differs from the latter in that it is completely plastic-free. Ideal for use as a pallet base sheet to prevent pallet moisture from damaging products.

Recommended use: flour, sugar, cement, etc.
